## Report Description

This report is designed to identify facilities within the State which impact the State's hazardous waste shipment total and have significantly changed since the last reporting cycle. The user specifies the number of facilities to print (thus making the report useful for both large and small States). All shipment quantities refer to the management quantity in the National Biennial RCRA Hazardous Waste Report. Quantities are limited to wastes where the Handler is to be included in the National Report, the GM Form is to be included in the National Report, and the shipped amount for that GM Form is greater than zero.
