

OECD Worksheet 6: Landfill Sites

Report run on: September 28, 2015 - 2:33 PM

Version: 5.0

User Selection Criteria

Report Data: Landfill Sites

Report Description

This report shows the quantity of hazardous waste managed, as reported on either the GM onsite form or WR form, for landfill (H132) and deepwell injection (H134) management categories. Waste streams are included in this analysis if: 1) the facility was marked for inclusion in the National Biennial Report; and 2) the waste stream was marked for inclusion in the National Biennial Report.

The report shows number of sites, short tons managed, metric tons managed (conversion factor: 1 short ton = 0.90718474 metric tons), and rounded metric tons managed. If a handler managed waste in both a landfill and deepwell injection, the site is counted only once in the number of sites. The report shows these results for each Biennial Report cycle that has been finalized since and including 2001.
