Report Data: Generation and Management

Report Description

This report shows the quantity of hazardous waste generated and managed in short tons, metric tons (conversion factor: 1 short ton = 0.90718474 metric tons), and rounded metric tons. Waste streams are included in the generation analysis if: 1) the facility was marked for inclusion in the National Biennial Report; 2) the waste stream was marked for inclusion in the National Biennial Report; and 3) the reported source code for the waste stream is not equal to 'G61' (i.e., hazardous waste received from off-site for storage/bulking and transfer off-site for treatment or disposal).

Waste streams are included in the management analysis if: 1) the facility was marked for inclusion in the National Biennial Report; 2) the waste stream was marked for inclusion in the National Biennial Report; and 3) the reported management method for the waste stream is not equal to 'H141' (i.e., the site receiving this waste stored/bulked and transferred the waste with no treatment or recovery, fuel blending, or disposal at the receiving site).

The report shows these results for each Biennial Report cycle that has been finalized since and including 2001.
